SOLANA HACKATHON · DEVNET DEMO

OneTab

Split it before you pay it.

no more "I'll pay you back later"

Two or three friends pay one seller together, each from their own wallet, in one Solana transaction.

SOPHIA KYU FELIX

ONETAB · SOLANA HACKATHON 2026

01 — THE PROBLEM

we've all been that friend

One friend pays. Everyone else owes.

01

One friend fronts it

The whole bill lands on one card or one wallet.

02

Shares become IOUs

Everyone else promises to pay their part back.

03

Then the chasing

Getting paid back means asking, then asking again.

Everyone pays their own share, in one transaction.

nobody fronts. nobody chases.

Four steps, one shared room.

01

Create

Seller, total and two or three payers. Shares split equally.

02

Get ready

Share the link. Friends sign in with their wallet and take a spot.

03

Approve

Each payer checks their share, then approves in their wallet.

04

Paid

One transaction pays the seller. Everyone sees the same receipt.

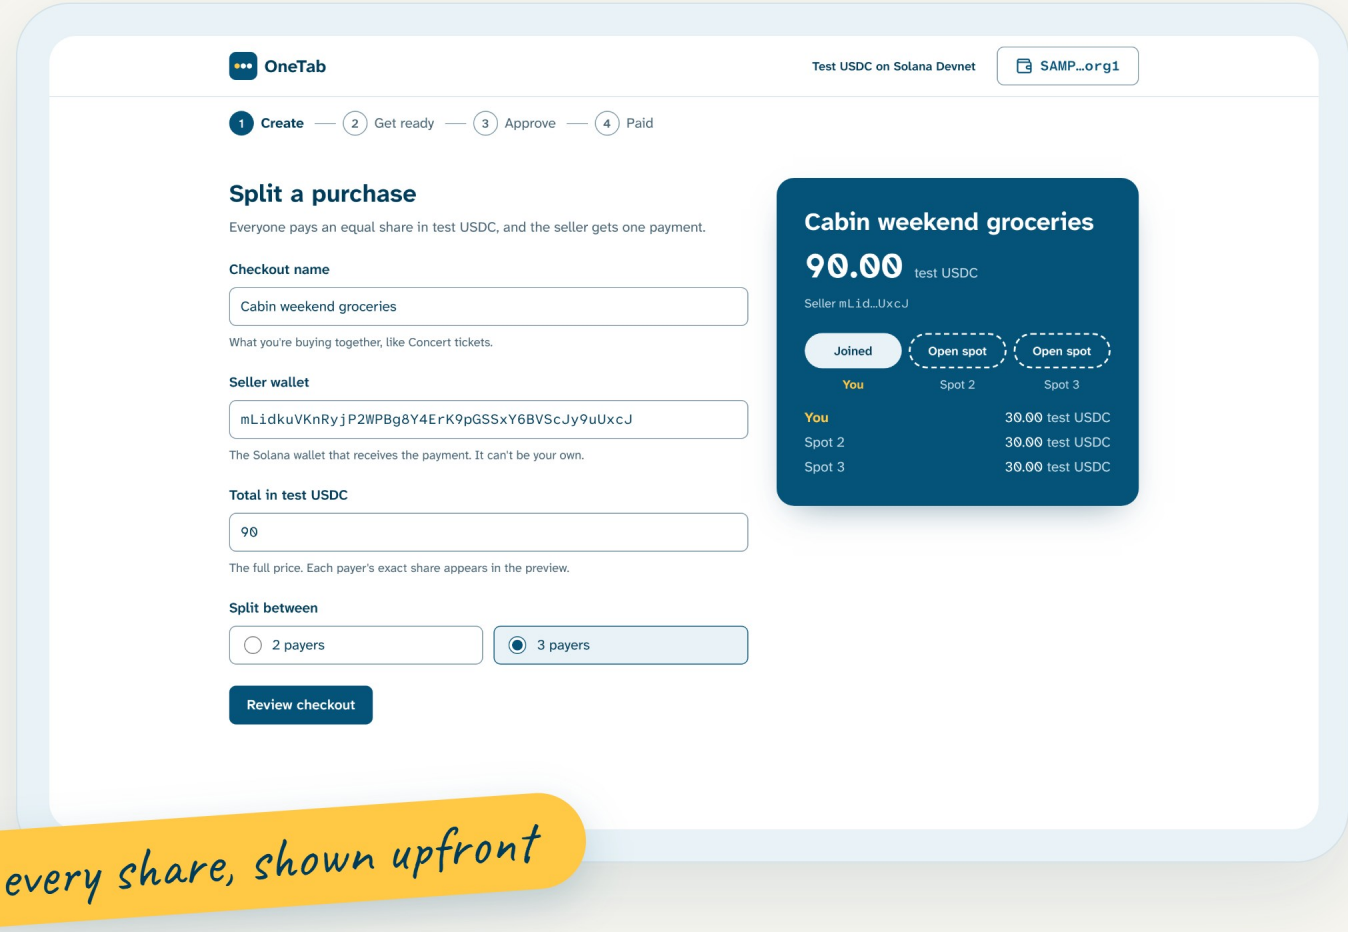

the app shows these 4 steps at the top, always

04 — CREATE

Set it up in one form.

Name it, paste the seller's wallet, enter the total and pick two or three payers.

Locked once created

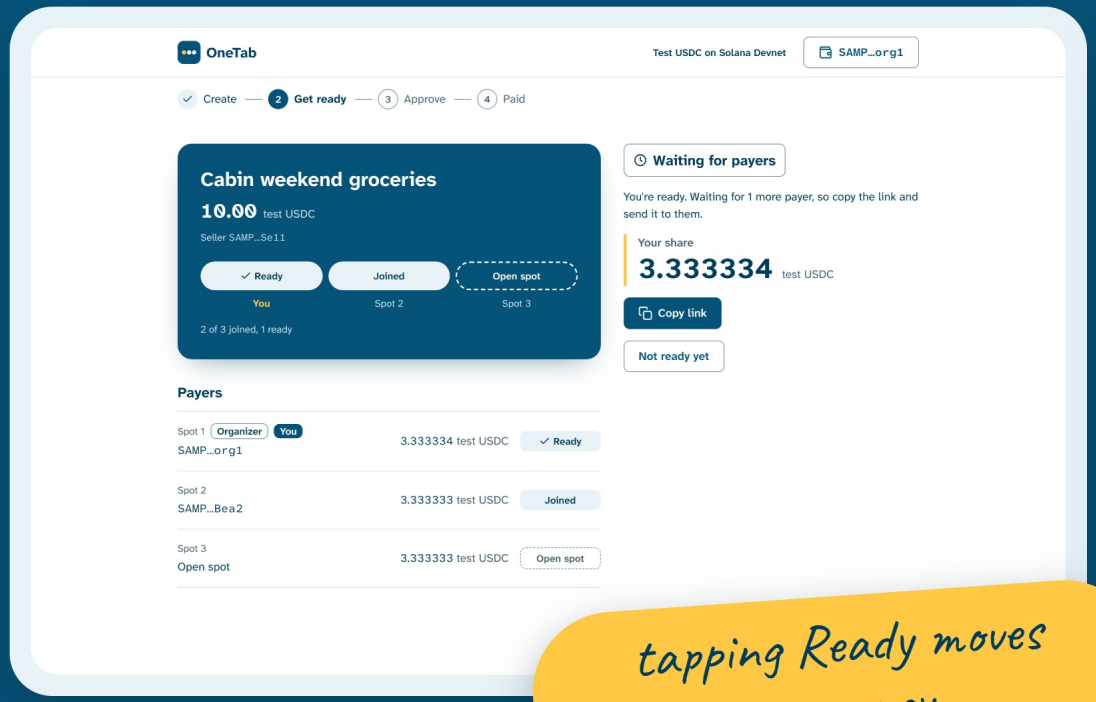

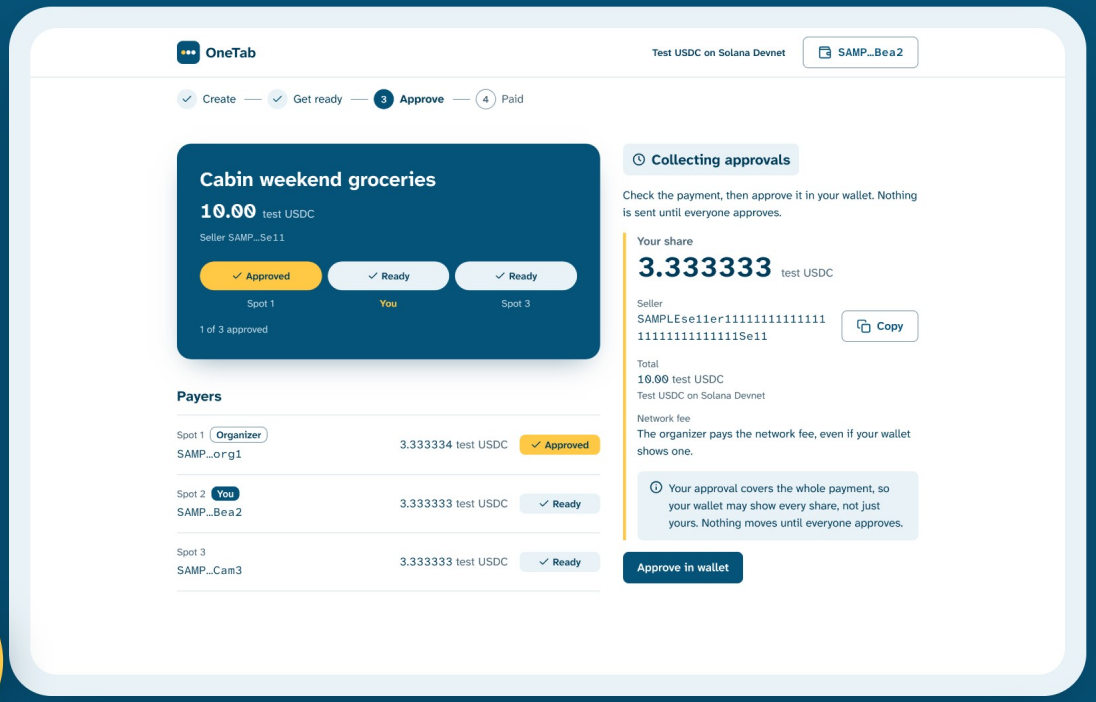

APP SCREEN · SAMPLE DATA

ONETAB · SOLANA HACKATHON 2026

05 — GET READY AND APPROVE

Everyone sees the same room.

tapping Ready moves no money

Get ready: friends join from

Approve: check your share, then sign.

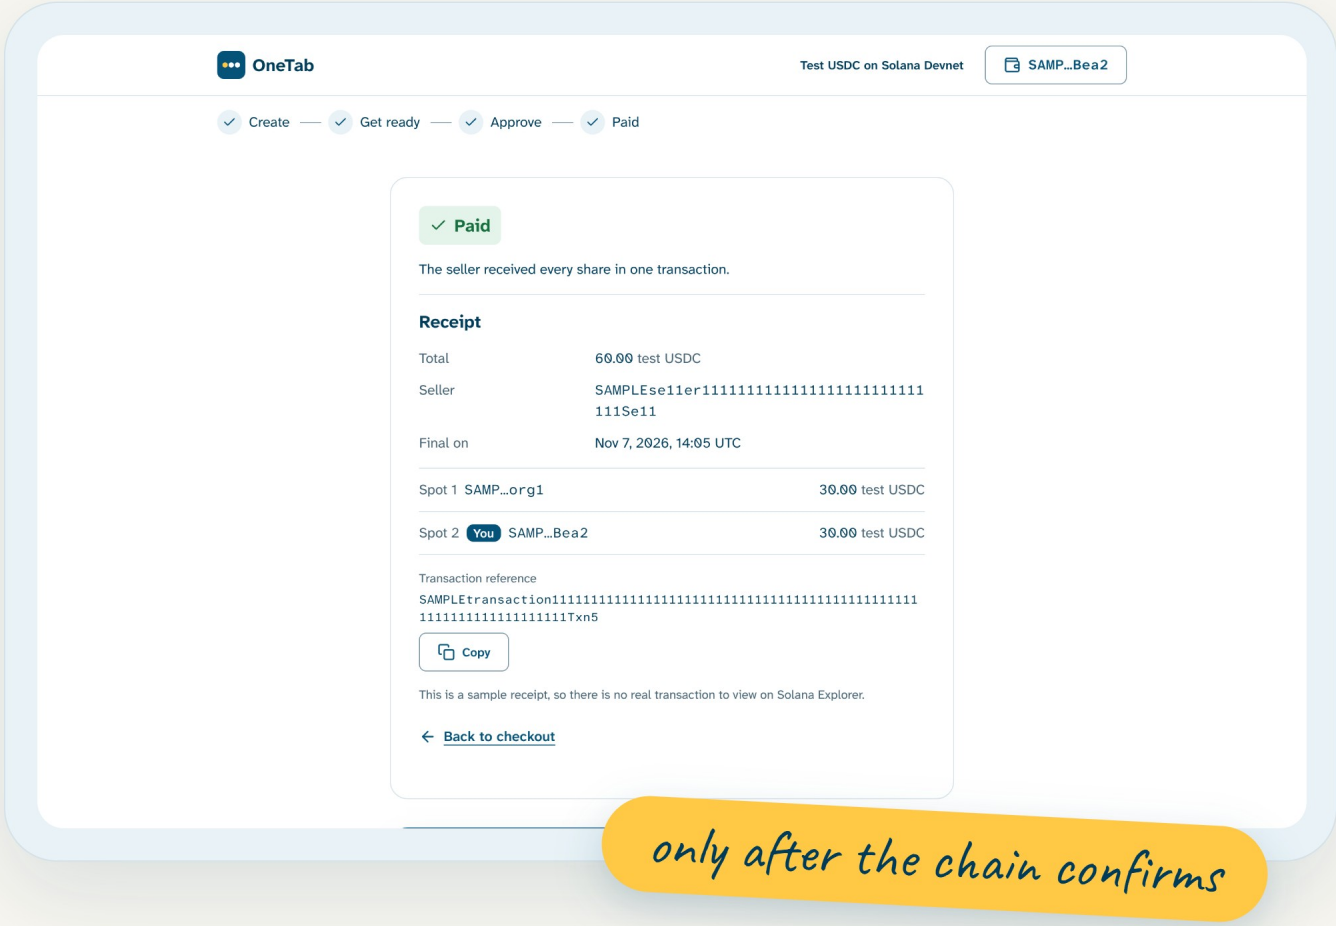

ONETAB · SOLANA HACKATHON 2026

06 — PAID

One payment. One receipt.

Everyone sees the same receipt: seller, total, every share and a Devnet explorer link.

Shown only once confirmed

APP SCREEN · SAMPLE DATA

ONETAB · SOLANA HACKATHON 2026

07 — WHY IT'S SAFE

Nothing moves until everyone approves.

Sign only

Wallets approve one shared message. The server checks every signature, then submits it.

Checked first

Before your wallet opens, the app checks the seller, the total and your share.

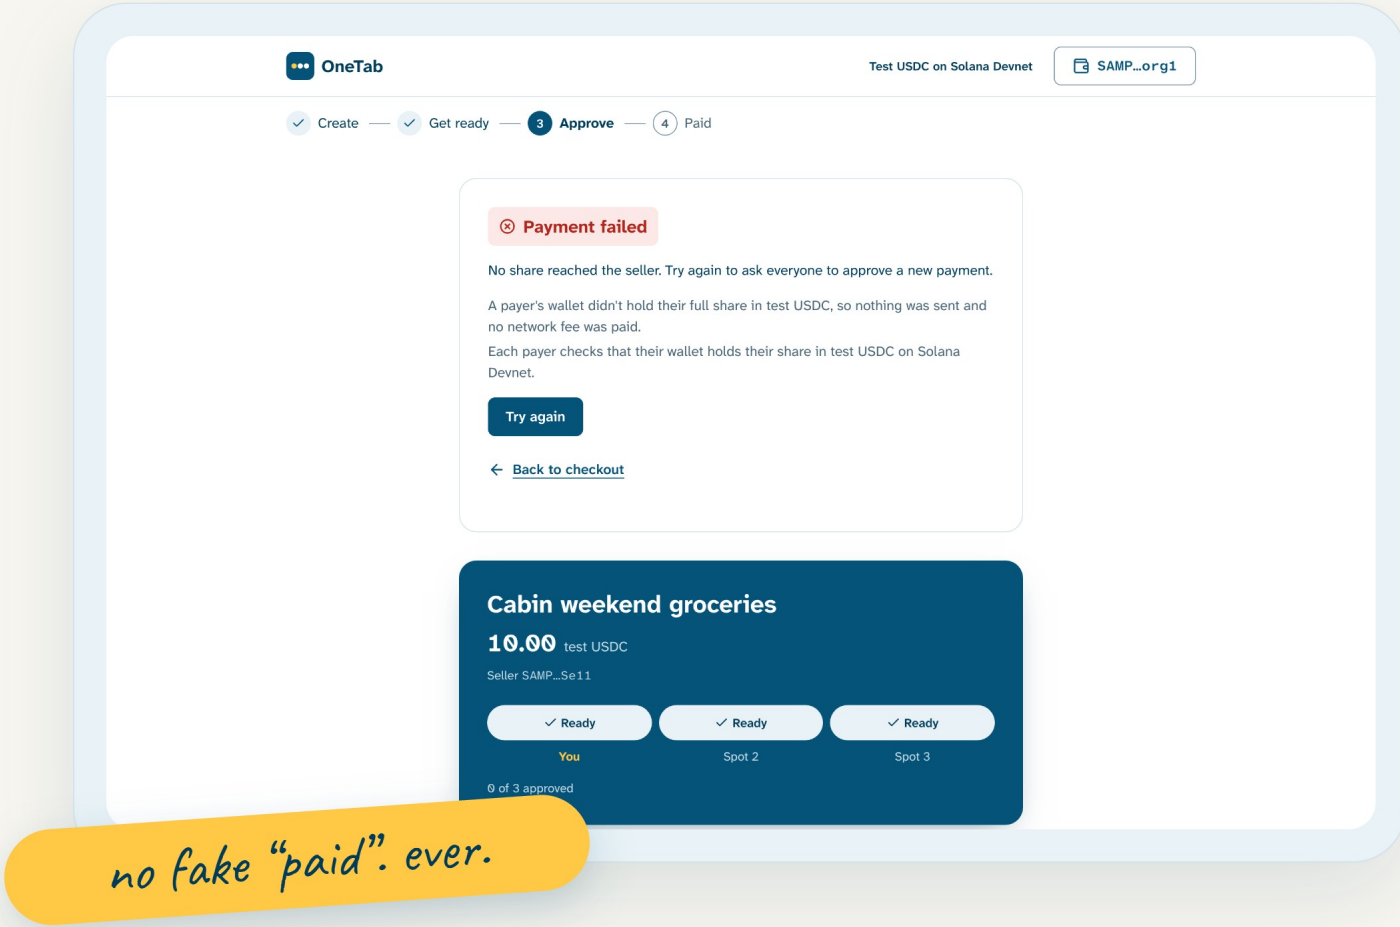

Confirmed only

A receipt shows only once the network confirms. A transaction reference alone never counts.

Failures stay honest.

Pending **Paid** **Failed** **Expired** **Unresolved**

Each state looks different, and a failure says why. Try again shows only once the last attempt is safely over.

09 — PROVEN ON DEVNET

The core payment already works.

2

Phantom wallets approved one frozen message

1

Devnet transaction paid the seller, finalized

4

test USDC to a separate seller, 2 from each

Payments' proof run, 7 Nov 2026 · slot 519,612,865 · view it on Solana Explorer

real wallets, real signatures, test money

What we built it with.

Next.js · React · TypeScript · Tailwind CSS

Solana Devnet · @solana/kit · Wallet Standard · Phantom

Supabase Postgres · Vitest · Playwright

all of it in a 24-hour build

1,700+
unit tests

150+
browser tests, with axe accessibility checks

0
custom on-chain programs: plain token transfers in one transaction

Where we are, and what's next.

Now

- Create to receipt, tested in the browser
- Live wallet signing, sign-only
- Two-wallet payment proven on Devnet

Next

- Hosted Devnet app at [hosted URL]
- Three payers paying live, end to end
- Real Phantom runs on every screen

Later

- Mobile wallets
- Custom splits
- Payment history

honest status. no vaporware.

THAT'S ONETAB

Thanks!

Split it before you pay it. Questions and ideas welcome.

TRY IT
